

QuantSentry — Brand Book & Guidelines

Version 1.0 · 2026-09-23 · owner @Someone

The single source of truth for how QuantSentry looks, sounds, and shows up. Every colour, font, and token here is mirrored from the live site — this reflects what is actually built.

Parent company: **Quant Technology Group (QTG)**.

1. Brand Foundation

What we are. QuantSentry is the data intelligence layer for trading businesses — network-based AI risk and business intelligence that turns disconnected data into profitable action.

Positioning. For modern trading businesses drowning in disconnected data, QuantSentry connects your systems, detects coordinated abuse, and answers business questions with cited evidence — so you decide what to do next, faster.

Mission. Take a trading business from disconnected data to profitable action.

One-liner (metadata, verbatim): Network based AI risk and business intelligence for modern trading businesses.

Brand pillars

1. **Connected** — one platform over data that used to live in ten places. The network is the moat.
2. **Evidence, not opinion** — every claim, alert and answer comes with reviewable proof and cited sources.
3. **Clarity over cleverness** — plain language, clear next actions.
4. **Vigilant** — always-on monitoring. We watch so the team doesn't have to.

Personality. Precise · calm · technical · trustworthy. A sharp analyst, not a hype machine.

Names (spell them exactly)

Name	What it is
QuantSentry	Company / platform. One word, camelCase. Never "Quant Sentry".
Argus AI / Argus	The AI intelligence engine. "Ask Argus."
Sentry Risk Network	The opt-in cross-member risk signal network.

Name	What it is
Platform · Managed Desk · Network	The three product tiers.
Quant Technology Group / QTG	Parent company.

2. Logo & Mark

The mark. A cluster of six three-pronged nodes in a teal gradient — connected data points forming a network. A single node, rotated 30°, is the favicon/app-icon.

- Primary: `public/images/quantsentry-icon-teal-cluster.png`
- App/favicon: `app/icon.svg` (single node on `#070b0c` rounded square, 22% radius)

The lockup = mark + wordmark. Mark left, sized to 1.08em of the wordmark, 5px gap. Wordmark = "**Quant**" (weight 450) + "**Sentry**" (weight 550), set solid in **DM Sans**, near-white top-down gradient fill. On hover the mark performs one 360° orbit (respects reduced-motion).

Weight logic. "Quant" is lighter than "Sentry" on purpose — emphasis lands on the watch/guard. Keep this contrast in any recreation.

Clear space & size. Minimum one node-width of clear space all sides. Minimum: mark 16px; full lockup 120px wide — below that, mark alone.

Logo don'ts

- Don't recolour outside the teal family (`#48c7c3` / `#5dd3ce` / `#56c995`).
- Don't add a space, hyphen or line break inside "QuantSentry".
- Don't equalise the two wordmark weights.
- Don't place the mark on a light or busy background without the dark chip.
- Don't stretch, rotate (beyond the hover orbit), or add shadows/outlines.
- Don't rebuild the wordmark in another typeface.

Parent lockup. QTG has its own white lockup (`public/images/qtg-lockup-white.webp`) for "part of Quant Technology Group" contexts — never merged into the QuantSentry lockup.

3. Colour

Dark-first is the brand. Near-black surface, teal as the single accent that carries identity and interaction. All values are the live `:root` tokens.

Surfaces & lines

Token	Hex	Use
--bg	#080a0b	Page background (brand base)
--panel	#101416	Cards, raised surfaces
--panel2	#0c0f11	Deep panel / footer
--soft	#161b1d	Section dividers
--line	#202628	Primary borders
--hair	#272e30	Hairline borders, pills, ghost buttons

Ink (text)

Token	Hex	Use
--ink	#f7fbfa	Headings, primary text
--ink2	#d4dada	Body / lede
--ink3	#99a3a4	Secondary paragraph text
--ink4	#747f80	Eyebrows, captions, muted labels

Accents

Token	Hex	Meaning
--cy Sentry Teal	#48c7c3	The brand. Links, primary buttons, focus, active, the mark
--grn Signal Green	#56c995	Positive / confirmed / healthy
--amb Alert Amber	#d6a94e	Attention / needs review
--red Risk Red	#ff6b6b	Risk / error / breach

Usage rules

- **60/30/10:** ~60% dark surfaces, ~30% ink, ~10% teal. Teal is a scalpel — one clear accent per view.

- Primary button = teal vertical gradient (`#48c7c3` → `#42bdb9` → `#249f9d`) with a light top-gloss; dark text `#062426` , never white.
- Semantic colours (green/amber/red) are **functional only**, never decorative.
- Focus ring is always `2px solid --cy` , 3px offset. Never remove it.
- The mark's internal gradient is a brighter `#5dd3ce` ; Sentry Teal `#48c7c3` is correct for everything else.

Accessibility. Body ink on `--bg` clears WCAG AA. Reserve `--ink4` for large uppercase mono labels only. Never signal state by colour alone — pair with an icon or label.

4. Typography

Three typefaces, three jobs. Never introduce a fourth.

Face	Role	Weights
DM Sans	The wordmark only	~550
General Sans	Everything — headings & body	400 / 500 / 600 / 700
IBM Plex Mono	Labels, eyebrows, data, table headers	400 / 500

Type scale (from `globals.css`)

Element	Size	Weight	Tracking
<code>h1</code>	<code>clamp(32px, 4.2vw, 54px)</code>	500	-0.03em
<code>h2</code>	<code>clamp(24px, 2.8vw, 36px)</code>	500	-0.03em
<code>h3</code>	17px	500	-0.015em
<code>.lede</code>	<code>clamp(15px, 1.3vw, 17.5px)</code>	400	—
<code>body p</code>	15px	400	—
<code>.stat</code>	38px	500	-0.035em
eyebrow / mono	10px	400/500	0.15–0.18em, UPPERCASE

Rules

- Headings are **medium (500)**, **not bold**, with tight negative tracking. Restrained, not shouty.

- `font-variant-numeric: tabular-nums` is global — numbers align in tables and stats. Keep it.
- Eyebrows / labels / table headers = IBM Plex Mono, uppercase, wide tracking, muted ink. A signature — use it to frame sections.
- Measure: headings ≤ 36ch, body/lede ≤ 66ch.
- Emphasis inside a heading uses teal (`.c`) on the key phrase — e.g. "Give Argus a Goal. **Track the Result.**"

5. Voice & Tone

In one line: clear, concrete, evidence-led. Plain words, every claim backed by proof. No hype, no jargon salad.

How we sound

- **Plain and direct.** Short sentences. "Find toxic flow, latency abuse and bonus fraud across brokerage accounts, with evidence your team can review."
- **Verb-first.** Connect. Detect. Find. Ask. Track. Review. Decide.
- **Specific over vague.** Name the risk (toxic flow, chargeback rings, mule networks, front-running), the number (100 confirmed cases), the source.
- **Evidence framing.** Tie capability to a reviewable artefact and a decision — "...before approving a payout."
- **Calm authority.** State what's true. Don't oversell or fear-monger, even about fraud.

Do / don't

Do	Don't
"Ask questions, monitor your business, research the market."	"Revolutionary AI-powered synergy platform."
"See clear evidence before approving a payout."	"Never worry about fraud again!"
"Prop trading is live. Brokerages coming soon."	Imply everything ships today.
Cite the source / show the proof.	Assert without backing.
Sentence case in UI and headings.	SHOUTING CAPS outside mono labels.

Mechanics

- **British English** (`en-GB`): anonymised, recognise, colour.
- Product names always exact-case (§1). "Argus," not "the Argus."
- Numerals for data (6 questions, 100 cases). Sentence case for headings and buttons; mono eyebrows are the only uppercase.

Boilerplate (approved)

- **Short:** Network based AI risk and business intelligence for modern trading businesses.
- **Descriptive:** QuantSentry connects your business data, uses Argus AI to find risks and opportunities, and gives clear answers so you can decide what to do next.
- **Company:** QuantSentry is the connected data and risk platform from Quant Technology Group.

6. UI & Component Language

The system that makes a screen feel like QuantSentry. All tokens live in `globals.css`.

Signatures

- **Gradient-border panels** (`.panel`): 1px gradient border around a dark inner card. Accent variants `.cy` / `.grn` / `.amb` tint the border for state.
- **Pills** (`.pill`): rounded-full, hairline border, mono/small text — tags, statuses, nav.
- **Radii**: buttons/pills fully round (999px); cards 14px; inner cards 13px; small tiles 11px.
- **Dotted field** (`.dots`): faint masked radial dot-grid — the "connected data" motif behind hero/feature zones.
- **Floating nav pill** (`.navpill`): rounded, blurred, semi-transparent header that tightens and gains a teal border on scroll.

Buttons

- **Solid** (`.btn.solid`): teal gradient, dark text, glossy top highlight. One per view — the primary action.
- **Ghost** (`.btn.ghost`): transparent, hairline border → teal on hover. Secondary actions.
- Height 40px, 18px side padding, 14px medium text.

Spacing & layout

- Max content width 1200px (`--max`); `.wrap` adds 24px gutters.

- Sections: 82px vertical padding, 1px top border. Hero: no top border, radial teal glow top-right.
- Grid gap 18px; card padding 22–24px.

Motion

- Fast, eased, purposeful: 0.16–0.4s, cubic-bezier(.22,1,.36,1). Fades rise 8px.
- The mark's hover orbit is the one flourish; everything else is subtle. Always honour `prefers-reduced-motion`.

Data visualisation

- Teal = neutral/brand series, green = positive, amber = attention, red = negative/risk. Tabular figures on; muted mono for axis labels. Use the `dataviz` skill and swap its palette for the tokens above.

7. Quick Reference

Colours — `bg #080a0b` · `panel #101416` · `ink #f7fbfa` · `ink2 #d4dada` · `ink3 #99a3a4` · `ink4 #747f80` · `teal #48c7c3` · `green #56c995` · `amber #d6a94e` · `red #ff6b6b` · `line #202628` · `hair #272e30`

Type — Wordmark: DM Sans · UI/body: General Sans · Labels/data: IBM Plex Mono. Headings weight 500, tracking -0.03em, sentence case. Eyebrows: mono, uppercase, +0.15em.

Names — `QuantSentry` (one word) · `Argus AI` · `Sentry Risk Network` · `Quant Technology Group`.

Voice — Clear, concrete, evidence-led. British English. Verb-first. Cite the proof. No hype.

Logo — Teal node-cluster mark + gradient wordmark ("Quant" 450 / "Sentry" 550). Teal family only. Never split the word.

Maintained alongside the codebase. When a token changes in `app/globals.css` or `app/_seo/site.ts`, update this doc so it stays the source of truth. Mirrors `docs/brand-book.md` in the repo.
